

Custom Door Components™ Announces Process Improvements

The Steam-Thru particleboard operation has recently added a new Acrowood Air Density Separator (ADS). This device cleans our raw material stream of unwanted contaminants. The ADS is designed to effectively remove metal and rocks. This new equipment will eliminate the foreign material that may have caused tooling damage and machining problems in the past.

All particleboard produced and shipped after October 31, 2003 was processed using the new Acrowood Air Density Separator.

Mixed orders are always available at Custom Door Components. Place your truckload orders for Particleboard, Profiled Particleboard, Lockblocks, Mineral Core and Profiled Mineral Core in any combination.
